Modern control theory reflects the mainstream of current technological developments and trends. in order to strengthen the basis of outstanding treatment method of thinking. students analyze problems and problem-solving ability of the principle of linear system analysis based on state space model and an integrated approach. including the establishment of a state-space model. the motion of the system analysis. system controllability and observability. pole placement. state observer design. Lyapunov stability theory and linear quadratic optimal control and nonlinear system analysis and control of content. Modern control theory described in layman's language. theory with practice. as much as possible from the issues to be discussed. concepts and methods in the analysis of the actual background. While in the introductory system analysis and control system design methods. appropriately given the corresponding MATLAB function. using MATLAB software to effectively solve some calculation and simulation of the control system in order to deepen the understanding of the concepts and methods to facilitate the reader. Book suitable as automation and its related undergraduate textbook for graduate students. are also available for study reference related engineering and technical personnel.
